

# Asphalt Sealcoating: Field Checklist

Pre-application checklist for a successful sealcoat job.

## Site Preparation

|                          | TASK                                          | NOTES |
|--------------------------|-----------------------------------------------|-------|
| <input type="checkbox"/> | Surface swept and free of loose debris        |       |
| <input type="checkbox"/> | Oil spots primed with oil-spot primer         |       |
| <input type="checkbox"/> | Cracks $\geq 1/4"$ sealed and cured 24+ hours |       |
| <input type="checkbox"/> | Vegetation along edges trimmed back           |       |
| <input type="checkbox"/> | Drainage clear; no standing water             |       |

## Conditions

|                          | TASK                                                 | NOTES |
|--------------------------|------------------------------------------------------|-------|
| <input type="checkbox"/> | Air temp 50°F+ and rising                            |       |
| <input type="checkbox"/> | No rain forecast for 24 hours                        |       |
| <input type="checkbox"/> | Pavement surface temperature $\geq 50^\circ\text{F}$ |       |
| <input type="checkbox"/> | Humidity below 90%                                   |       |
| <input type="checkbox"/> | Wind under 15 mph (overspray risk)                   |       |

## Logistics

|                          | TASK                                        | NOTES |
|--------------------------|---------------------------------------------|-------|
| <input type="checkbox"/> | Lot closure plan posted 48 hours in advance |       |

|   |                                                 |  |
|---|-------------------------------------------------|--|
| ■ | Tenant / customer notifications sent            |  |
| ■ | Vehicles relocated; barricades and cones staged |  |
| ■ | Striping layout photographed for reapplication  |  |
| ■ | Post-cure reopening time confirmed (24 hr min)  |  |
